

SELECTED WORK FOR REDO

Chad Koslovsky

Full-stack commerce engineering · AI-intensive development

Loveland, Colorado | chad@koslovsky.xyz

[GitHub](#) | [LinkedIn](#) | [Portfolio](#)

I build the full product around a useful piece of automation. NuPrice, an Amazon reseller SaaS product I designed, built and operated, connected marketplace inputs, repricing rules, accounts, subscriptions and support. The product was acquired. My current freelance engineering and art workflows are AI-intensive, including token-maxing: extensive AI-assisted iteration, with hands-on responsibility for what I integrate and deliver. Velatis adds context-aware AI, identity and privacy-aware interface work.

Why Redo

Redo's e-commerce products connect returns, exchanges, package protection, order tracking and customer support. My closest commerce experience is NuPrice: marketplace data, repricing rules, accounts, subscriptions, analytics and support in one product. Velatis adds context-aware AI, identity and private-data workflows.

Selected product work

NuPrice

Independent SaaS product | Acquired product

Designed, built and operated NuPrice, an Amazon reseller SaaS product that was acquired.

Built Node.js workflows around Amazon marketplace and competitor-data ingestion, user-defined repricing rules, automation, monitoring and analytics.

Owned the product around the core pricing workflow: customer accounts, subscriptions, CMS and in-product support.

Velatis velatis.io

Velatis client collaboration | Current

Built privacy-aware research workflows joining identity, notes, deterministic chart data, sharing and payments with context-aware AI.

Connected deterministic tools and AI assistance while keeping ownership and privacy boundaries explicit; shaped the client product interface.

AI-intensive freelance engineering and art

Heavy AI use and token-maxing across current freelance engineering and art: extensive AI-assisted iteration across code and creative work.

I retain hands-on product responsibility: shaping interfaces, integrating systems and deciding what is ready to deliver.

CHAD KOSLOVSKY

Professional experience

Technomancy IT LLC

Founder / Product Engineer / Systems Lead | 2015-Present

Own discovery, architecture, full-stack delivery and support; build MCP servers, authenticated connectors and tenant-aware services for client products and internal workflows.

Front Range Internet Inc.

Senior Systems Engineer / Datacenter Architect | 2015-2019

Led infrastructure readiness, recovery verification, monitoring and escalations; codified deployment and translated technical controls into auditor-readable evidence.

Office Evolution

Systems / Software Engineer | 2013-2014

Connected CRM, provisioning, onboarding and service operations through centralized applications and explicit cross-department workflows.

PlumChoice / Everon

Network Engineer | 2011-2013

Operated SMB networks and endpoints, built diagnostic tooling, and worked directly with business owners and users.

IBM

Infrastructure and Systems Focal | 2009-2011

Operated shared enterprise infrastructure and automated audit and backup workflows while coordinating changes, incidents and escalations.

Current platform work

AI IT support platform for small businesses

Technomancy IT LLC | Current

Developing a TypeScript, Next.js and PostgreSQL support platform joining CRM, scheduling, billing, analytics and AI-assisted operations.

Designed tenant-aware shared services and graph-backed retrieval, analytics and batch evaluation paths; owned product code, deployment, telemetry and support.

Technical capabilities

TypeScript · React · Next.js · Node.js · SQL and PostgreSQL · MCP servers and enterprise AI connectors · Agents and tool orchestration · CI/CD · Monitoring and observability
